

I- Docker

1 – Après installation de Docker toolbox sous Windows Home.

```
MINGW64/c:/Program Files/Docker Toolbox
```

```
      ##  
    ## # #  
  ## # # # #  
 { O }  
  \_____/
```

docker is configured to use the default machine with IP 192.168.99.102
For help getting started, check out the docs at <https://docs.docker.com>

Start interactive shell

```
Dikela M'Babane@Dikela-94 MINGW64 /c:/Program Files/Docker Toolbox  
$
```

b) Placer vous dans le répertoire du projet.

c) Création de l'image du service sur docker

Exemple pour le microservice-lecteur :

> Cd microservice-lecteur

Construction de l'image docker

>docker build -t microservice-lecteur.jar .

Le point à la fin est à ne pas oublié

```
$ docker build -t microservice-lecteur.jar .
Sending build context to Docker daemon 40.67MB
Step 1/4 : FROM openjdk:14
--> 72467478c013
Step 2/4 : EXPOSE 8002
--> Running in d0691836cfc8
Removing intermediate container d0691836cfc8
--> b97c4ac7d3bc
Step 3/4 : ADD target/microservice-lecteur.jar microservice-lecteur.jar
--> 57c211e629bc
Step 4/4 : ENTRYPOINT ["java", "-jar", "/microservice-lecteur.jar"]
--> Running in 773649954e09
Removing intermediate container 773649954e09
--> 798ed0149539
Successfully built 798ed0149539
Successfully tagged microservice-lecteur.jar:latest
SECURITY WARNING: You are building a Docker image from Windows against a non-Windows Docker host. All files and directories added to the
build context will have '-rwxr-xr-x' permissions. It is recommended to double check and reset permissions for sensitive files and di
rectories.

DiKeLa M'Babane@DIkela-94 MINGW64 ~/Documents/M2IF DAUPHINE/MicroService/MicroserviceV2/microservice-lecteur (master)
$ docker images
REPOSITORY          TAG                 IMAGE ID            CREATED             SIZE
microservice-lecteur.jar  latest             798ed0149539       12 seconds ago     537MB
microservice-livre.jar  latest             205e6f963b2f       18 hours ago       537MB
openjdk              14                 72467478c013       9 days ago         497MB

DiKeLa M'Babane@DIkela-94 MINGW64 ~/Documents/M2IF DAUPHINE/MicroService/MicroserviceV2/microservice-lecteur (master)
$
```

On voit la dernière image créée il y a 12 secondes.

d) Exécution de l'image

> docker run -p 9090:8002 microservice-lecteur.jar

9090 est le port du conteneur

8002 est le port de la configuration dans le Dockerfile

Microservice-lecteur.jar est l'image docker créée

```
DiKeLa M'Babane@DiKeLa-94 MINGW64 ~/Documents/M2IF DAUPHINE/MicroService/MicroserviceV2/microservice-lecteur (master)
$ docker run -p 9090:8002 microservice-lecteur.jar

Ouvrir votre navigateur

Coller l'adresse IP copié précédemment suivi de : puis le port du conteneur

II- Déploiement des microservices

Les phases sont indiquées dans l'image suivante.

Cet exemple illustre le déploiement de notre service « Client »

```

DiKeLa M'Babane@DiKeLa-94 MINGW64 ~/Documents/M2IF DAUPHINE/MicroService/MicroserviceV2/client (master)
$ minikube start --driver=virtualbox
* minikube v1.10.1 sur Microsoft Windows 10 Home 10.0.18362 Build 18362
* Utilisation du pilote virtualbox basé sur le profil existant
* Démarrage du noeud de plan de contrôle minikube dans le cluster minikube
* minikube 1.11.0 is available! Download it: https://github.com/kubernetes/minikube/releases/tag/v1.11.0
* To disable this notice, run: 'minikube config set WantUpdateNotification false'

* Restarting existing virtualbox VM for "minikube" ...
* Options de réseau trouvées :
  - NO_PROXY=192.168.99.100,192.168.99.102
  - no_proxy=192.168.99.100,192.168.99.102
* Préparation de Kubernetes v1.18.2 sur Docker 19.03.8...
  - env NO_PROXY=192.168.99.100,192.168.99.102
  - env NO_PROXY=192.168.99.100,192.168.99.102
* Terminé ! kubectl est maintenant configuré pour utiliser "minikube".

DiKeLa M'Babane@DiKeLa-94 MINGW64 ~/Documents/M2IF DAUPHINE/MicroService/MicroserviceV2/client (master)
$ kubectl cluster-info
Kubernetes master is running at https://192.168.99.101:8443
KubeDNS is running at https://192.168.99.101:8443/api/v1/namespaces/kube-system/services/kube-dns:dns/proxy

To further debug and diagnose cluster problems, use 'kubectl cluster-info dump'.
